BiodivPond Active Contributor Meeting

Biodiversa+ BiodivPond Pilot online meeting

September 11th 2026, online

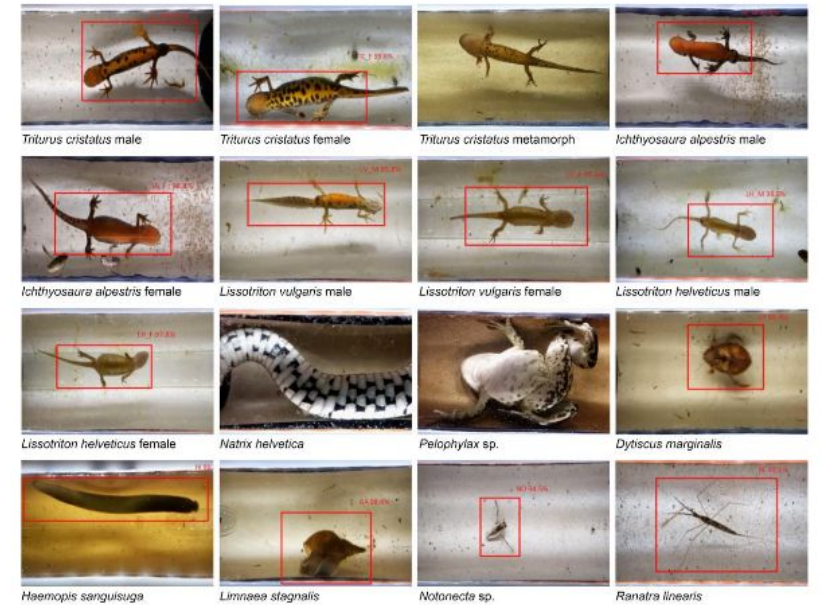

Agenda points

- Xavier Mestdagh (LIST): NEWTCAM and NAMPHIMO presentation
- Stakeholder (citizen science) pond selection process
- Collaboration with relevant projects
- Publishing the core pond sampling protocol

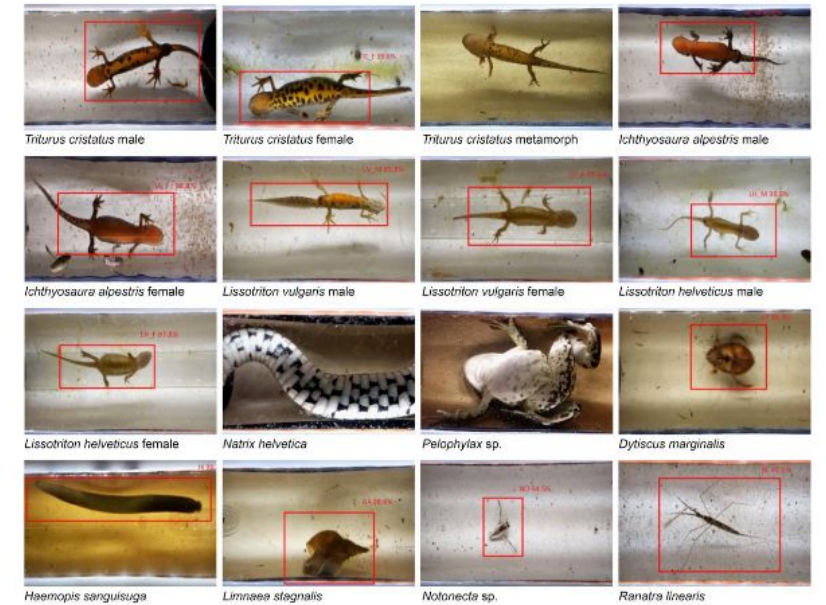

Xavier Mestdagh on NEWTCAM

- Luxembourg Institute of Science and Technology
- Presentation of the technology
- Options of lending the device to the BiodivPond partners

NAMPHIMO & NEWTCAM discussion

- Funding for NEWTCAM devices should be available if the MANTIS Hub gets approved (Biodiversa+ T2.5.3 additional activities)
- If available, how do we include NEWTCAM in BiodivPond?
- Should we attempt to add BiodivPond fields to NAMPHIMO?

Monitoring the Danish ponds in 2026 DK

PUBLISHED

September 16, 2026

MODIFIED

September 17, 2026

As the Danish team for the Biodivpond Pilot project, this year we headed out into the field to sample six core ponds. Luckily, our field campaign took place during spring and summer, the absolute best time of year to be outside in Denmark!

We selected three ponds in Zealand (the island home to Copenhagen) and three in Jutland (the Danish peninsula connected to continental Europe). The main objective of this sampling campaign was to gather data to compare different biodiversity monitoring techniques for pond biodiversity.

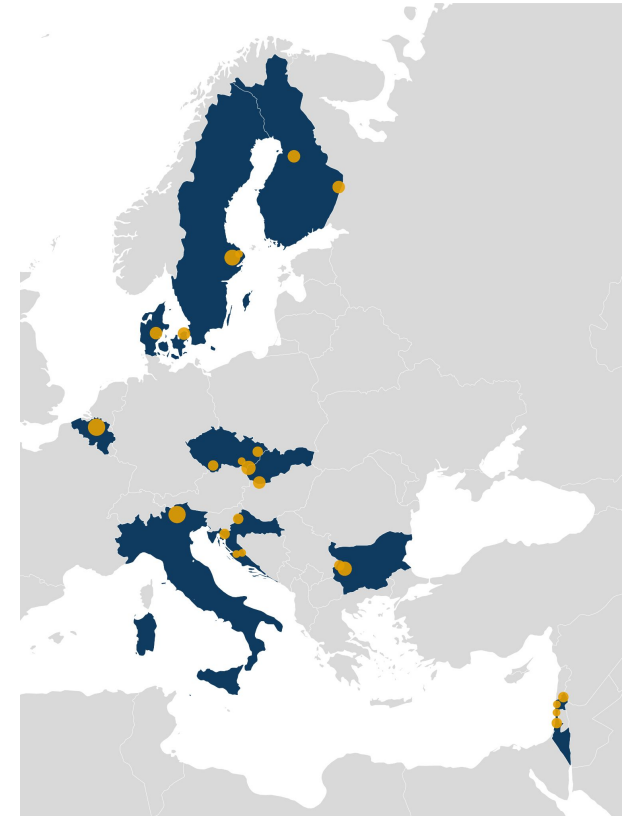

First, we deployed acoustic recorders to monitor bat, amphibian, and bird activity. We deployed them in late April and plan to keep them out through late October, after which wildlife activity naturally drops off for winter. Unfortunately, one of our recorders was stolen after just two months - it turns out we might have

Stakeholder pond selection process

- 520 ponds to be sampled in 2027 by stakeholders (citizen scientists)
- Who will be sampling?
- How many pondscapes?
- Stratification criteria
- Random or selected?
- Do we pilot remote-sensing methods for selection?

Collaboration with relevant projects

- The first objective of BiodivPond pilot is to establish a transnational pond monitoring network across Europe
- Add a signposting page to the BiodivPond web page
- Share sampling protocols
- Biodiversa+ TRANSPONDER project
- NAMPHIMO project
- Other initiatives - let Jonas know
- Let's put more countries and points on the map 🐸

Publishing the core pond sampling protocol

- Other projects should be able to find it and use it
- Should we publish the protocol on Zenodo?
- Please review the [existing sampling protocol](#) ADDING COMMENTS ONLY
